Universal Dual Sim Holder Generation 3

The new Generation 3 universal dual sim holder is our top seller. Dual Sim solutions have been out for a while but none of them was ever satisfying. Either the dual sims were integrated in a cover and you were unable to put the phone in a car kit any more because the size of the phone had changed. Or they were so unreliable and eating up too much battery. But the biggest problem was that you had to built a dual sim for every single mobile phone model.

Not any more!

The new Generation 3 universal sim fits any phone! Our universal sim holder is so reliable and easy to use. No more hassle with 2 mobile phones, seperate business calls from private calls. Save money by combining 2 cards. Change networks when the signal is weak. You can even receive phonecalls on both numbers at the same time using call divert. And save more phone numbers, because you can save on 2 simcards. And it works with every phone!

How does this work?

It is simple. Just cut out your regular sims and fit them into our universal dual sim holder. The holder has the size of a normal sim card. By turning the phone off and on again, you change simcards. Most Nokia mobile phones can quickly turn off and on again with the quick code *3370#.

overview:

FEATURES:

- very reliable
- 2 numbers in one mobile phone
- dual sim holder as big as regular simcard
- can hold 2 simcards

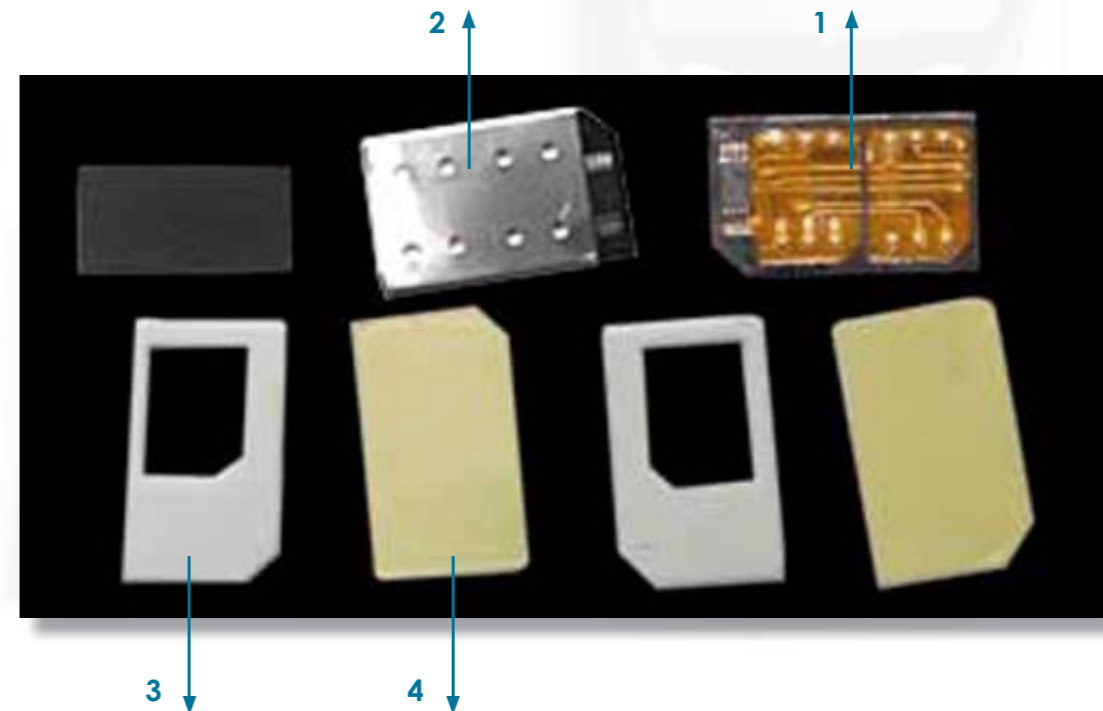

- Once simcards are cut, close the holder and use both cards
- Holder does not use more battery

- You can still use your cut simcard the regular way
- Just put them in the „Resume Card“ (on the left)
- 2 resume cards delivered with every dual holder

Installation Manual Universal Dual Sim holder Gen.3

1. Please touch a water tab or s.th similar first for grounding reasons

2. Cut the simcards

First possibility (as shown on the pictures)

Stick the adhesive label (4) on the simcard and cut along the visible line with a good pair of scissors. If everything is correct, the simcards will fit tightly into the holder (1).

Second possibility (as shown on the pictures)

You can just place one of the "resume cards" (3) on your simcard and draw around the hole with a pencil. This way you are saving the adhesive label (4). Cut around the line with a pair of scissors afterwards.

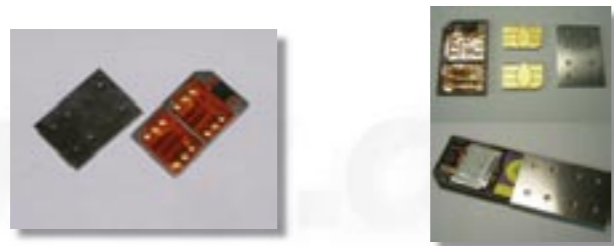

3. Put your cut simcards face down into the holder (1)

If you have stuck the adhesive label (4) onto the simcard before, please take it off first..Make sure that the cut simcards are small enough and that the contact parts are clean.

4. Close the holder (1), by fitting the cover (2) carefully on the holder (1)

5. Done!

Put the sim holder in your mobile phone instead of your regular simcard and turn on the phone. One of the two simcards should be active. We suggest to use a PIN-number for each simcard in order to identify the card. But you do not have to use PIN numbers. This also works if you do not use pin numbers. Every time you turn the phone off and on again, simcards are being switched.

For most Nokia mobile phones, the quick code *3370# will make the mobile phone turn off and on again. You can still use the cut simcard the regular "single way" by putting it into the "resume card" (3) and fixing it with the adhesive label (4) or a piece of tape. The sim holder works with every phone. You should still be careful and not take it out for no reason. Every mobile phone puts a different amount of pressure on the holder and the contact parts should not be damaged or twisted.

6. Receiving calls on both lines

In order to receive calls on both numbers at the same time, you must program a call divert:

If you want to use number A and receive calls on number B at the same time, please dial *62* number B# then turn the phone off and on again.

If you want to use number B and receive calls on number A at the same time, please dial *62* number A# then turn the phone off and on again.

If you want to reset the phone, please dial ##62# and push the dial button.

7. Troubleshooting

If the switching is not working and you can use just one number:

Check if the single sim works with the "resume" card (3) .

Clean the sim holder and the simcards with a tissue .

Make sure that both sim cards have the same thickness, and if not stick some tape on the thinner simcard in order to make it thicker.

Or you can increase the pressure on the holder by putting a piece of thicker paper or tissue inbetween the sim holder and the battery or on top of the sim holder. This will help in most cases!

You can also stick some tape onto both simcards in the holder and increase the pressure.

Attention:

We will not take any responsibility for cutting the simcards! You are doing this at your own risk!

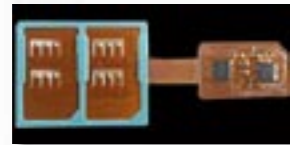

However, if you are a dealer, we have a pincer for sale, that cuts the sims for you. Please ask for more details.

Dual Sim Holder (5 types)

Our dual sim holder is not as universal as the holder mentioned before, but each type will fit about 10 different types of mobile phones, notably the most popular Nokia phones.

So if you are scared of cutting your simcards, this is the sim holder for you.

overview:

FEATURES:

- Use two simcards simultaneously in one mobile phone
- Switching between networks fast and easy
- very easy to handle
- compatible with many common phones
- ready to go within less than one minute
- if phone support, receive calls on both lines using call divert

With this holder, you can use two simcards at the same time in one phone. Change simcards within seconds. Separate professional calls from private calls. Change networks if the signal is weak. Save money, too.

Sony Z18, J16, CMD J6, CMD Z5, T68i
Panasonic GD92, GD93

Installation Dual Sim Holder

The installation is very easy:

1. Put the 2 simcards onto the adapter
2. Place the adapter single part where in your phone, where the regular simcard is.
3. In most cases, the adapter part that holds the 2 simcards will be placed between the battery and the phone cover. However, with some phones it is possible to twist the adapter slightly and put it under the battery.
4. Close the phone. Switching the phone off and on will switch the simcard. If you are using a Nokia phone, the code *3370# will make most Nokia phones turn off and on quickly, when simcard switching is requested. We suggest to use a PIN-number for each simcard in order to identify the card.
5. Receiving calls on both lines is possible, if you set up a call divert on your phone, diverting all calls to for number B to number A, if your phone has a call divert function.
6. Troubleshooting:
If the switching is not working and you can use just one number:

You can increase the pressure on the holder by putting a piece of thicker paper or tissue in between the sim holder and the battery or on top of the sim holder. This will help in most cases!

Twin Sim Battery for Nokia (3 types available)

overview:

BATTERY FOR NOKIA WITH INTEGRATED DOUBLE SIM-CARD HOLDER FEATURES:

- use 2 simcards in one phone
- no hassle, simcard holder integrated in battery!
- very reliable
- very easy to use
- ready to go within seconds
- available for Nokia (3 types)

Type 1 compatible with:

Nokia 3310, 3315, 3350

Type 2 compatible with:

Nokia 8210, 8250, 8850, 8310, 6510

- 2.** Close the phone. Switching the phone off and on will switch the simcard. As you are using a Nokia phone, the code *3370# will make most Nokia phones turn off and on quickly, when simcard switching is requested. We suggest to use a PIN-number for each simcard in order to identify the card
- 3.** Receiving calls on both lines is possible, if you set up a call divert on your phone, diverting all calls to for number B to number A, if your phone has a call divert function.

Nokia 8210 with Twin Sim battery

Triple Sim Cover for Nokia 3310, 3315

overview:

FEATURES:

- use 3 simcards simultaneously on one mobile phone.
- Switch between networks within seconds
- Very easy to handle
- Built in within a few minutes
- Compatible with Nokia 3310 and 3315, use instead of cover.

The Nokia 3310 is still one of the most popular and most reliable mobile phones. And there are still a lot of people who want a mobile phone to be not too small and easy to handle. And just for making phonecalls and sms.

Now you can use 3 (!) simcards with our new triple simcard cover with your Nokia 3310 or 3315.

3 simcards means 3 different networks, 3 times more memory for saving phone numbers, messages. etc...

Installation:

1. Installation is so easy and done in a minute. Just take off your phone back cover and use our triple simcard cover instead. Put 3 simcards in, hook up the cover to the phone where your simcard normally sits and you are all set.
2. Close the phone. Switching the phone off and on will switch the simcard. We suggest to use a PIN-number for each simcard in order to identify the card. As you are using a Nokia phone, the code *3370# will make the phone turn off and on quickly, when simcard switching is requested.
3. Receiving calls on 3 lines:
Receiving calls on 3 lines is possible, if you set up a call divert on your phone, diverting all calls for number B and C to number A, if your phone has a call divert function.

Nokia 3315 with Triple Simcard Holder

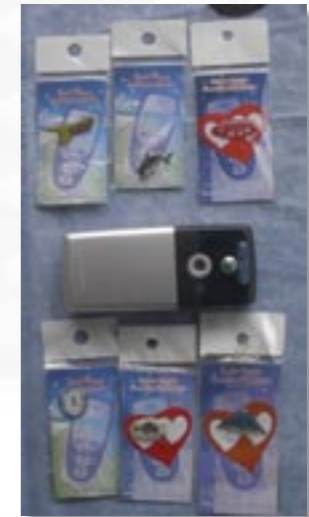

Mobile Phone Flashlights (different types available)

overview:

FEATURES:

- Mobile Flashlights will flash when you make a call, receive a call or a message
- Impulse-based, no battery needed
- Will work with any GSM phone
- Turn the volume off during a conference, flash light will tell you if someone calls

Installation:

1. Find the impulse spot on the back of your phone by letting the phone ring and placing the flash sticker on the back of your phone
2. Just stick the flash light on the back of your GSM phone. Done!

Batteries
